Castles & Crusades FoundryVTT Game System Installation

This set of instructions covers installing the [Castles & Crusades FoundryVTT Game System](#) in your local copy of [FoundryVTT](#) (Version 9 or higher).
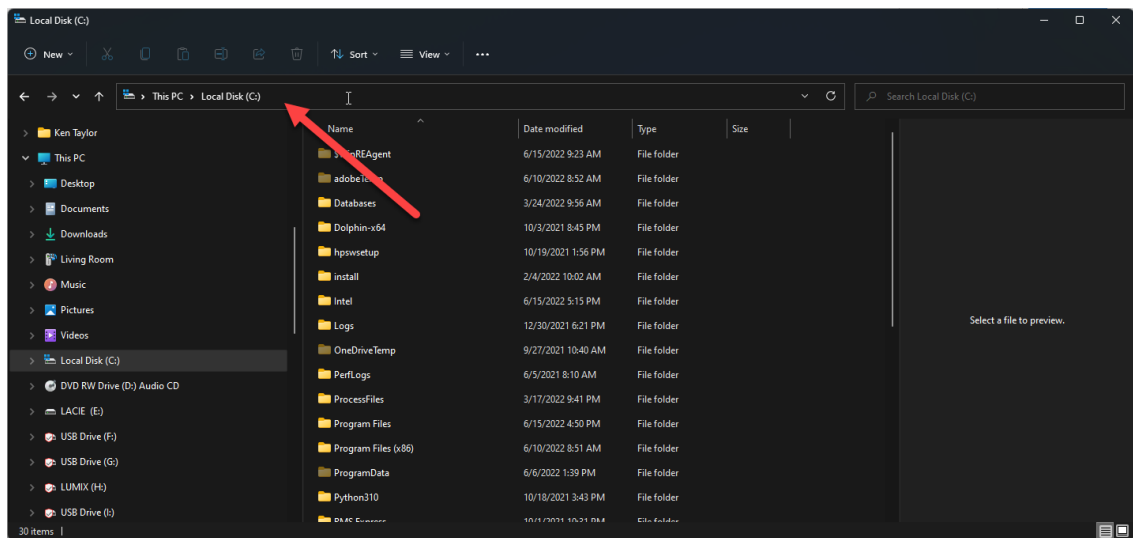

Manual Installation

This covers a manual installation by copying the files into FoundryVTT's `Data/systems` folder.

Microsoft Windows

To install the Game System under windows please do the following:

1. Make sure you have exited out of the FoundryVTT application (i.e. it is NOT running)

2. Download the zip file for desired version release of the game system here: https://gitlab.com/troll-lord/foundry-vtt/ruleset/castles-and-crusades/-/releases

3. Note where you downloaded the zip file (you will need this later)

4. Open file explorer (Win + e key on the keyboard)

5. In the path bar type in `%LOCALAPPDATA%\FoundryVTT\Data\systems` and hit `Enter`

6. Unzip the contents of the contents of the version release zip into a folder named `cnc` (*Note you can also rename the unzipped default folder to* `cnc` *as well*)

7. Open the FoundryVTT application

8. PRESTO! The game system is installed

Linux

1. Make sure you have exited out of the FoundryVTT application (i.e. it is NOT running)
2. Download the zip file for desired version release of the game system here: https://gitlab.com/troll-lord/foundry-vtt/ruleset/castles-and-crusades/-/releases
3. Note where you downloaded the zip file (you will need this later)
4. Locate FoundryVTT's `Data/systems` folder (this is dependent on where you installed FoundryVTT for your Linux distribution)

5. Unzip the contents of the contents of the version release zip into a folder named `cnc` (*Note you can also rename the unzipped default folder to* `cnc` *as well*)
6. Open the FoundryVTT application
7. PRESTO! The game system is installed

Automated Installation

NOTE: This is not available currently due to the repository being private
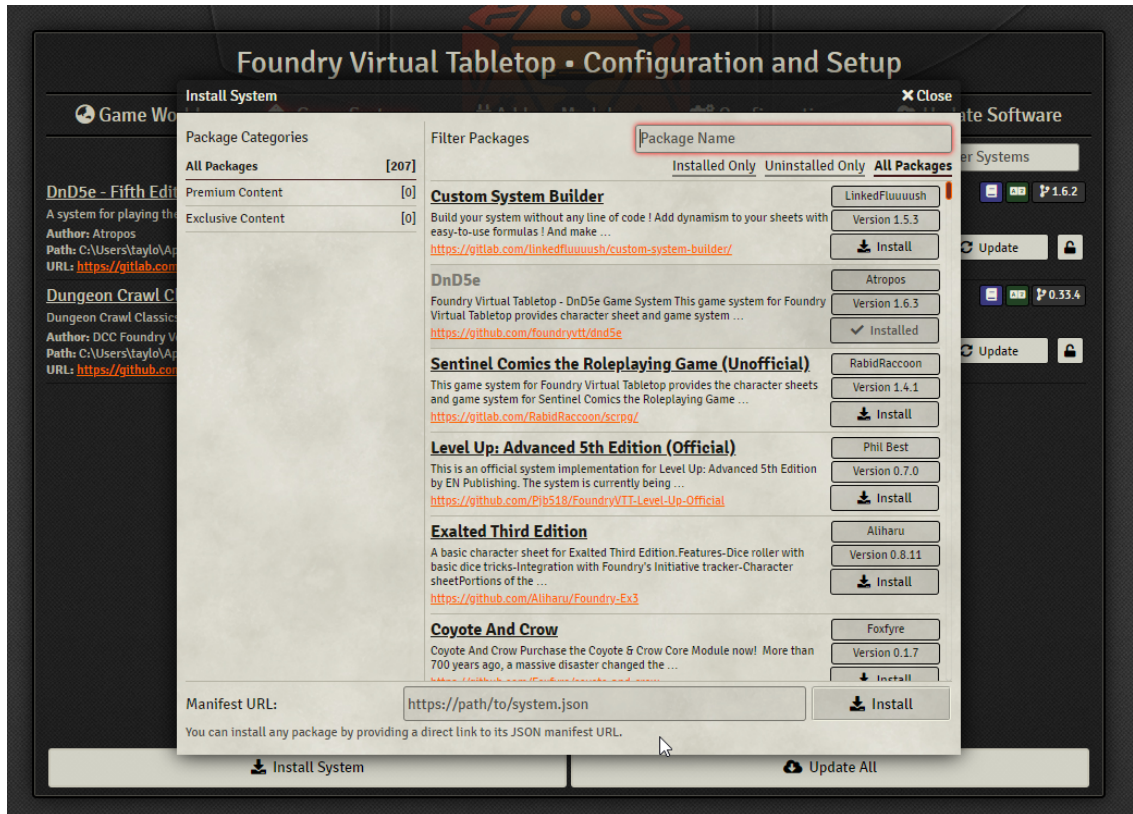

This covers installing the system via the Manifest URL in FoundryVTT.

To using the automated installation, please do the following:

1. Launch the FoundryVTT application
2. Click on "Game Systems":

3. Click "Install System":

4. Enter the following URL in the "Manifest URL:" textbox: `https://gitlab.com/troll-lord/foundry-vtt/ruleset/castles-and-crusades/-/raw/<VERSION_NUMBER>/system.json` where VERSION_NUMBER is the version that you want to install (e.g., for version 0.1.4 the URL would be: https://gitlab.com/troll-lord/foundry-vtt/ruleset/castles-and-crusades/-/raw/0.1.4/system.json)
5. Click the "Install" button
6. PRESTO! The game system is installed
